

THRU-DECK CAPSTAN DESIGNED FOR LONGEVITY

Using only the best materials, and a gear box with the highest rating available in the industry, you can be sure that the Patterson Thru-Deck Capstan will keep you up and running for years to come with little to no maintenance. Our capstan can help minimize your downtime and save your company money.

Bigger is not always better. With a more compact height, we designed our capstan head with plenty of space to meet wrap requirements for modern cordage and for ease of use for deck hands of all sizes.

By eliminating the unnecessary double whelped barrel, we remove the sharp ridge separating the two and its resulting dangerous cut point. This makes operations safer and extends the life of cordage.

Key Features

Triple-Sealed Slewing
Bearing Design

Full Length Barrel Whelps

Compact Height

Tapered Base

21st Century Pegs
